MISCELLANEOUS

Touch Up Kit Paint Spray Quart of Paint

- Every drawer has quality dove tail construction
- Simple removable drawers for easy cleaning
- No particle board anywhere!

- Soft closing drawers and doors
- L-Bracket reinforced cabinets for heavy granite, cement or other stone tops

TRIM INFORMATION

Crown Moulding

Crown Moulding is used to finish the tops of tall and wall cabinets. Some cabinets are Full Overlay - this means the doors overlap the front face frame of the cabinet box, leaving only a small amount visible. Since this visible reveal will vary depending on the specific cabinet line you choose, it may require the Crown Moulding to be installed on top of the cabinet frame instead of to the face, secured with blocking from behind. Crown is available in various styles and sizes to accommodate different designs and ceiling heights.

Base Moulding

Base Moulding is generally used to provide a decorative trim at the floor level of base cabinets by installing it with the profiled edge facing up. It completes the lower sections of panel skins used on islands and peninsulas to give them a more furniture-like feel. Installing the moulding along the lower section of cabinet back panels and sides, and ending at the toe recess will create one continuous look.

Filler

Filler is more commonly used to "fill" any gap or leftover space in a run of cabinetry by field-cutting them to the desired size. They can be used vertically to provide additional space between a cabinet and a wall in order to keep the edge of doors from binding into the wall, or to keep fully extended drawers from impacting close obstacles. They can be used horizontally as crown, lightrail, or valance, or to add additional dimension as a riser moulding. Fillers are available in a variety of lengths to minimize waste.

Light Rail Moulding

Light Rail Moulding is used to finish the bottom of wall cabinets. It can function as a trim to conceal under cabinet lighting fixtures and provide a barrier from the light glare, or as a decorative enhancement. Light Rail Mouldings are available in a variety of styles and sizes to accommodate different styles. When selecting a Light Rail Moulding, be mindful of the moulding height to ensure that the open space left after installation will accommodate any countertop appliances.

Corner Moulding

Corner moulding is used to cover an unfinished edge or gap where two panels or pieces of material meet at a 90 degree angle. Outside Corner Moulding is used to cap the raw edge of material visible on an exterior corner. Inside Corner Moulding is used to cover any gaps where two pieces of material meet on an interior corner. They should be used in conjunction with any design that will require finished paneling on the back of a cabinet such as an island or peninsula.

Toe Kick

The purpose of a toe kick space is to create a recess for your feet, which allows you to stand close to the countertop or workspace more comfortably. The toe kick stretcher attached to the cabinet is usually made of unfinished material. After installation, a finished Toe Kick Moulding is applied to cover an entire run of unfinished toe space. Toe Kick Moulding is a 96" long strip of finished covering that is fieldcut and positioned in the recess to provide a continuous completed look to the cabinetry. Our cabinets come with a toe kick.

Skin Panels

Skin Panels are 1/4" plywood with a matching finish on one side. They are available in a variety of sizes in order to provide finish options for different needs. These Skin Panels are available in specific sizes and are designed to fit on the side of a cabinet behind the face frame edge with field cuts required. Oversized Skin Panels, such as those used to finish the back of an island or to cover a stack of cabinetry, are larger and must be field-cut to the desired dimensions.

Scribe Moulding

Scribe Moulding is a thin piece of finished trim used to cover any areas that may have uneven gaps or raw edges visible once installation is complete. It is slightly flexible, allowing it to follow slight curvatures against walls, floors, or ceilings. It is typically used any place the straight edges of cabinetry visibly come into contact with a surface that is bowed or uneven. It is available in 96" lengths and must be field-cut to cover any visible gaps or seams against walls, floors, and ceilings up to 1/2" wide. It is also used to cap the cut, unfinished edge of a Toe Kick Moulding or any other raw edge of material up to 3/4" wide.

Starter Strip/Riser Moulding

A Starter or Riser is used as a mounting frame for Crown Moulding in order to increase the overall height of a Crown Moulding assembly, or allow it to rise flush to the ceiling. A Starter or Riser is mounted to the cabinet top in order to simulate an extension of the cabinet, allowing the Crown Moulding to be installed higher. Using a Starter or Riser in conjunction with a Crown Moulding also provides the ability to better disguise an uneven ceiling, as one end of the Crown Moulding may be mounted higher or lower than the other end along the face of the Riser.
